## Editorial

Curiously, the Russians found that the weight of the body is different when measured with legs on the scale and when measured with head on the scale [1]. They published this as a curious fact without offering an explanation. I am going to explain it in this article. The Cabala of the ancient Jews [1] states that our material body is a Temple, where the Spirit of God resides. This means that within each one of us there is a Spirit of God, but we are not consciously aware of it because it is in our Subconscious. The Spirit was deliberately put in the Subconscious to give us freedom of choice, which is the biggest gift of the Creator to us. Considering this and other wise sides in our creation, I think Supreme Intelligence must have created us and He created us (and the whole Universe) in His image.

Astronomical observations found that the Sun and all stars have androgynous torus (donut) shape NEMFs with running along the equator two chains of alternating vortices (spinning clockwise) and anti-vortices (spinning counterclockwise) [2]. Astronomical observations found that the alternating vortices and anti-vortices in the northern hemisphere are spinning in opposite directions to the alternating vortices and anti-vortices of the southern hemisphere. This means that the whole northern hemisphere of the Sun spins in direction opposite to the direction of spinning of the southern hemisphere. In other words, all stars are vortex (spinning clockwise) on top of anti-vortex (spinning counterclockwise) in dynamic equilibrium.

The cyclic changes in the activities of all stars, coupled with changes in their torus shape aura (which is nonlinear electromagnetic field (NEMF)), is a proof that the coupled vortex - anti-vortex of the stars are in dynamic equilibrium. The stars' activity is high when the vortex and anti-vortex are closer. Then the torus NEMF spins faster and sucks more energy from the Space Matrix NEMF, which results in higher turbulence and higher activity. This continues until the pressure at the equator reaches the critical value, which the solar plasma can tolerate. Then the vortex and anti-vortex distance each other, the torus starts spinning in opposite direction and releasing NEMF energy to the Space Matrix. The star becomes elongated along the poles, and its turbulent activity drops down to zero.

I hope the Solar Dynamic Observatory (SDO) longed in space to measure the shape of the Sun for one whole cycle of solar activity will confirm my model's prediction [2] of belching at the equator during solar activity and elongation toward the poles during low solar activity. Ancient sources give me this assurance. In the Jewish Cabala, the four-letter God Yahwe has the shape of a Tetragrammaton, which is a pyramid with top-down symbolizing vortex intersecting a pyramid with top up symbolizing anti-vortex. The six-pointed Star of David is two-dimensional representation of the tri-dimensional Tetragrammaton.

In the two-dimensional representation of the Tetragrammaton (the Star of David), the upper triangle with top down symbolizes the vortex spinning clockwise. This is because according to the rule of the folded fingers of the right hand, when the folded fingers are in the direction of spinning (clockwise), the thumb is downward showing the direction of the induced magnetic field. The lower triangle with top up symbolizes the anti-vortex spinning counterclockwise. This is because according to the rule of the folded fingers of the right hand, when the folded fingers are in the direction of spinning (counterclockwise), the thumb is upward showing the direction of the induced magnetic field.

The whole material world was created by spinning Black Holes of anti-matter and the nonlinear electromagnetic field (NEMF) that separated the matter from the anti-matter got imprinted on all material creations [3]. This made all material creations to be material bodies and light nonlinear electromagnetic fields (NEMFs). All living beings (humans, animals, and plants) are emotional because they have a second emotional NEMF (which we see as aura) magnetically attached to the NEMF of their material body. This means that the two NEMFs (of the Spirit and the material body) spin in opposite directions and by creating opposite magnetic polarity are magnetically attracted to each other, as two permanent magnets with opposite polarity would do.

In all living beings, the upper upside-down triangle is the light Spirit (NEMF) spinning as a vortex (which we see as aura), while the lower upright triangle symbolizes the material body, whose NEMF spins as an anti-vortex [4]. Thus, down we are a material body and up we are Spirit. I spent 40 years of my life measuring the aura's EMF and I found it to be nonlinear EMF (NEMF) and to be emotional (that is why we call it Spirit) [4]. We are a material body at the lower half of the body (the lower upright triangle in the Star of David) and light NEMF called Spirit (which we see as aura), in the upper half of the body (the upside-down triangle in the Star of David). Hope this explains why the body weight is different when measured with feet or head on the scale.

The turbulence of our NEMF is a chain of alternating vortices and anti-vortices along the backbone. All Yoga books say that these alternating vortices and anti-vortices (called chakras) spin in opposite directions in males and females. However, for both genders the NEMF of the Spirit is in the upper half of the body, while the NEMF of the material body is in the lower half of the body. The frequencies of spinning of the chakras have been measured and we know that the chakras of our material body in the lower part of the body (chakras #1 at the tailbone and the sexual chakra #2) have low frequencies of spinning, while the spinning frequencies of the light Spirit in the upper part of the body (chakras #5 (of throat) and #6 (of forehead)), are much higher.

So, the lower and upper parts of the body are different and we should not be surprised that the weight of the body is different when measured with feet on the scale or head on the scale. The middle chakras (chakra # 3 (Solar Plexus) and chakra #4 (Heart Chakra)) belong at the same time to both - the material body and

the Light Spirit (which we see as aura). They are called "Chakras of the Soul" [5]. Thus, Soul is the unity of body and Spirit and this explains why the Heart is considered the "Seat of the Soul". This explains why decisions should be made following our hearts not following our logical conscious Mind because the decision made with our heart includes our intuitive vision, which comes from the emotional Spirit residing in the Subconscious.

Since the vortices and anti-vortices (called chakras) of the male and female NEMFs (seen as auras) spin in opposite directions [5], the whole NEMFs of males and females spin in opposite direction and have opposite magnetic polarity. If so, the attraction between the sexes is magnetic in origin [6]. It is said that the Creator created everything in His image and indeed all stars, planets, and living being have the same torus shape NEMFs. However, we know from people who have been in a state of clinical death and came back that the Creator is light woven with Love. This is Light different from what we see with our eyes [6], but the androgynous torus shape Spirit of the Creator is also vortex on top of anti-vortex.

It seems that the androgynous torus NEMF of the Creator was split through the equator and from the vortex of the northern hemisphere the male Spirit (NEMF) was created and from the anti-vortex of the southern hemisphere the female Spirit (NEMF) was created. After the split each gender had only one chain of alternating vortices and anti-vortices. Then the clockwise spinning (like a vortex) NEMF of the male Spirit was stacked on top of the NEMF of the male material body spinning counterclockwise (like an anti-vortex) and the result was again a torus shaped male NEMF. Since the NEMF is self-organizing field, the one chain of alternating vortices and anti-vortices was now along the backbone in the middle of the torus shaped NEMF.

According to nonlinear physics the vortices spin clockwise and suck energy in. Since the male Spirit is a vortex in the upper half, during the day to be active the males will be sucking energy from the Space Matrix, which is NEMF. They will release this NEMF energy back to the Space Matrix during the night, so that they can rest and sleep. For this to happen, the direction of spinning of the male NEMF must turn to opposite at dawn and dusk, and so will the alternating vortices and anti-vortices of his NEMF. They are called "chakras" in Hindu texts, which means "spinning wheels" in Sanskrit.

The female Spirit spinning counterclockwise (like an anti-vortex) was stacked on top of the NEMF of the female material body spinning clockwise (like a vortex). The result was again a torus shaped female NEMF, but since according to nonlinear physics vortices spin clockwise and suck energy in, and the females have the vortex in the lower material body, they are sucking magnetic energy from the NEMF of the Earth during the day to be active. They will release this energy back to the Earth during the night, so that they can rest and sleep. Thus, the female Spirits also turn their direction of spinning to opposite at dawn and dusk as the male Spirits do, but the Spirits of both genders remains always spinning in opposite direction.

At conception, the fertilization is considered successful, and the development of embryo can start only when the NEMF of the Spirit is present. The Spirit's spinning NEMF is stacked on top of the spinning in opposite direction NEMF of the material body, which unites the NEMFs of mother's and father's DNA. As a result of the stacking of the NEMF of the Spirit on top of the NEMF of the material body, the human NEMFs of both genders have the same torus (donut) shape as the NEMFs of the Creator, the Sun, and the Earth only the males are vortex on top of anti-vortex, while the females are anti-vortex on top of vortex. This makes the spinning NEMFs of males and females opposite at all times (day and night) and make the attraction between the sexes magnetic [7].

Our western medicine considers only the material body and treats it with pharmaceuticals. In the US, the alternative medicine with modalities like acupuncture [8], homeopathy [9], energy medicine [10], etc., which work through the NEMF called Spirit, are denied rights of existence equal to those of the western pharmaceutical medicine. And this is done regardless of the fact that a lot of research on alternative medicine has been done in Europe and Asia and their right of existence proved. The US never had the money for research on alternative medicine – Clinton was the only president that provided money for acupuncture research, but in the pitiful amount \$20,000 for the whole US.
