### Abstract

Be I face myself. Man and woman are the best view for the human eyes. This paper studies predators and five poisons. The war with life and death has no baseline and the baseline should maintain. Animals are the masters of the earth

---

### Opinion

In the animal world, predator is everywhere every time. What are the methods of predators? The first method is the sense of smell, such as the python constantly sticking out its tongue to smell the smell in the air to determine the location and size of its prey. The second direction is the eyes. The eagle's eyes are very sharp. It can see the small mice and rabbits in the grass from high altitude, and then dive down to catch the prey. The third is mouth power or physical strength. The tiger is a strong predator, with enough physical strength and explosive power. It uses ambush tactics to prey. Endurance is the fourth method. For example, wolves have good endurance. They will not give up easily when hunting in groups. The fifth is the tongue. Lizards can freely use the ultra-fast ejection tongue to instantly send unsuspecting prey into the mouth. The sixth is the forelimb. A mantis has many sharp teeth on its developed forelimbs. Once an insect is found close, it will stretch out its forelegs like an arrow and quickly catch its prey. The seventh is networking. The spider will choose the right place to spit out the beaded web, and then wait for the prey to be delivered to the door. Predation, in a narrow sense, means that an animal catches another animal and kills it. In a broad sense, it means that one organism eats another organism, such as herbivores; Inter-eating among individuals of the same species, insectivorous plants and animals are also included. The population change of the prey has a great influence when preying.

After the temperature rises in the spring rain every year, the five poisons from the animal world will start to multiply and cause harm to people. Therefore, various customs of avoiding the five poisons have evolved to achieve the purpose of expelling bad things and seeking good luck. What are the five kinds of animals? They should be centipedes, venomous snake, scorpion, gecko and toad. The centipede is a terrestrial arthropod, and its body is composed of many segments. Each segment has a foot, so it is a multi-pedal organism. The toxicity is similar to that of scorpion, but the amount is not enough scorpion, only swelling and pain; Snakes can secrete special venom. Different snakes have different toxicity, but there are many cases of death due to being bitten by venomous snakes; Scorpion has some same features with snakes, except for a few, they are less toxic, because they are rarely seen except for breeding, and most of the toxic effects are convulsions that cause stroke; Gecko belongs to lizards, which can be divided into two categories that are toxic and non-toxic. Toad has the toad venom, its secretes is blinding and deadly, and its toxicity is greater than that of ordinary snakes, but toads are not as aggressive as snakes, so there are fewer cases; Cigarette is bad plant and wine is bad spirit, the five poison refers to Second-hand smoking, the wine, the wrongful sex behavior for money, wrongful gambling and drug abuse. Buddhism has relevant knowledge for reference. It is a metaphor for some bad things. It means doing some bad things. What are five poisonous

hearts? The Five Poison Hearts in Buddhism refer to the five kinds of heart, namely, greed, anger, ignorance, slowness and doubt. These five kinds of heart will cause us to create worse karma, just like poison will hinder our practice, so it is called Five Poisons. If the mind of five poisons still exists, it may turn into magic power or some worse methods. What is water pollution? Heavy metals have toxic effects on the human body, of which five are the most toxic, mercury, cadmium, lead, chromium and arsenic, commonly known as "five poisons". The "five poisons" in water pollution are phenol, cyanide, mercury, chromium and arsenic. Not be polluted is a kind of intelligence and static power [1-4].

War has five levels from reality. The first is the jungle, the weak are meat, the strong do eat, and sometime the weak overcome the strong. The second is the emergence of tools and weapons. The third is biological and chemical weapons. Biological and chemical weapons pollute the earth's environment and cause bacterial infection. The fourth is the death factory, such as the gas chamber of the Second World War. The fifth is the devastation factories, atomic bombs and hydrogen bombs. Human society has some predators. Avoiding being hunted is also a kind of wisdom. The first is sex that leads to population explosion. The second is racism. Jews were brutally hunted by racism. In the Second World War, Hitler massacred Jews. The third is terrorism. Flies always find the cracked egg. Only those with weaknesses are susceptible to evil influences. At first the United States was horrible country with atomic bomb for half century. USA wanted to act as the police of the earth, accumulating a lot of hatred and being hunted by terrorism

from the inside. The American government enjoys the joy of war, and the American people suffer from the loss of their children. In science, scientists eat meat. Universal gravitation played a role of the earth power hunter. Animals have poly posture and humans are colorful. I have no natural selection for my born, it is no problem that I have lived on earth, but this is my science and animal is the master of the earth. Plants are nature citation index, and every animal is everything from their natural powers, evolution hunts the whole animal world to form the largest meat in human society, including some gene hunters. Religion restricts human behavior. Some religions have bad power for woman and need economic base, and they are faith predators. The Noble prize was from horrible power named dynamite for one century, and it is somewhat a kind of achievement predators.

Life has five levels. I am not the meat for human society, this is the first principle. I am not the corpse for the war. I am healthy with water and without any pollution. Life creator and Organ regeneration are from plant space. It is bad to evolve animal body to create human organ. It is good for human space to create himself or herself. It is super power for plant space to create animal life.
